For Wide-Open Loading At The Pull Of A Rope

With our patented design, all of the bows move as one, in a single motion, swinging up and over loads without binding. Reverse swing bows are also available.

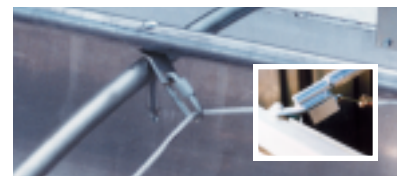

G005FL-0209

Turning Point Bow™ System

Bows swing up and completely out of the way for loading! Our exclusive Turning Point Bow™ system is controlled with a pull of the rope, while the operator remains safely on the ground.

A center pivoting ridgepole holds the tarp without sagging, so you need fewer bows. Angled brackets allow the bows to move freely, for a smooth operation from start to finish.

The patented locking system provides secure support during transport and serves as a skid plate when the bows swing closed.

Top: Bows swing back and up; bow in angled bracket; and center pivoting ridge pole with locking system [inset].
